About us

Leitat is the brand of the institution **Acondicionamiento Tarrasense**, a private and non-profit organisation. It is recognised by the Catalan Government (TECNIO) and by the Spanish Ministry of Science and Innovation.

Since 1906

We develop and bank on development, expanding activities towards the knowledge generation and its transfer to the productive fabric.

MISSION

Create and transfer economic, social and sustainable value to companies and entities, through research and technology processes.

VISION

Be a Technology Partner to companies and Administration, by generating a corporate culture allowing sustained growth and efficient functioning.

CORPORATE CULTURE

PRINCIPLES:

We believe in

- Creativity
- Innovation
- Sustainability
- Environmental Awareness
- Diversity
- Efficiency
- Efficacy

VALUES:

We act with

- Dynamism
- Independency
- Commitment
- Confidentiality
- Market-orientation
- Global perspective
- Talent

PRESENTACIÓN DE LA ENTIDAD

LEiTAT | Technological Center
managing your technologies
member of **TECNIO**
Be tech. Be competitive.

Our strategy

KEY FACTORS

Best practice: Constant improvement

1. **Talent incorporation**
2. **Customers and results orientation**
3. Integrated and profitable business management based on the **EFQM Model** (Excellence)
4. **Corporate image and culture**
5. Entrepreneurial **Leadership**
6. Technological **capacity**
7. Technology transfer (R+D+2i)

DIFFERENTIATION:

Flexibility

VALUE PROPOSITION: **The Technology Partner**

TECHNOLOGY CHALLENGES

- Promote the *technological entrepreneurial*
- Support the “*open innovation*”
- Lead *singular R+D+2i projects*
- Strengthen the *international collaboration* as value of the technological networking

PRESENTACIÓN DE LA IDEA DE PROYECTO

ElectroWetLand

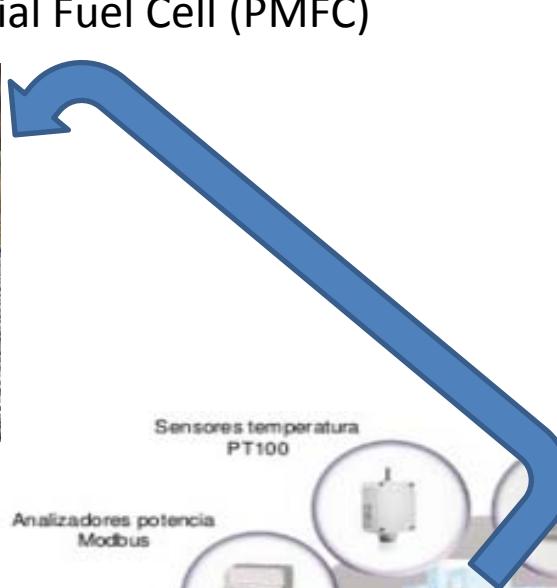

GREEN ROOF + Plant Microbial Fuel Cell (PMFC)

Ethernet / GPRS

Todas las señales y
sistemas necesarios para
la gestión de la
Eficiencia Energética.
Imprescindibles para
conseguir ahorrar energía.

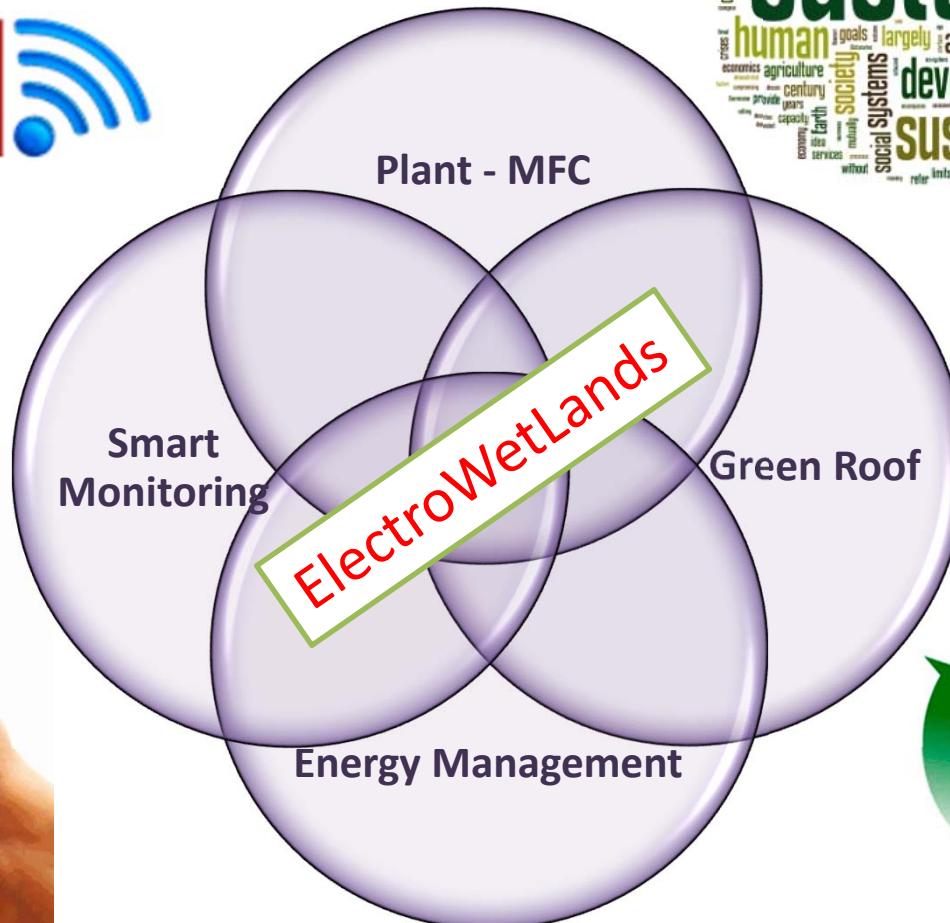

Energy Management
Smart & Sustainable
Monitoring
Greywater Treatment

CONCEPTO

WSN

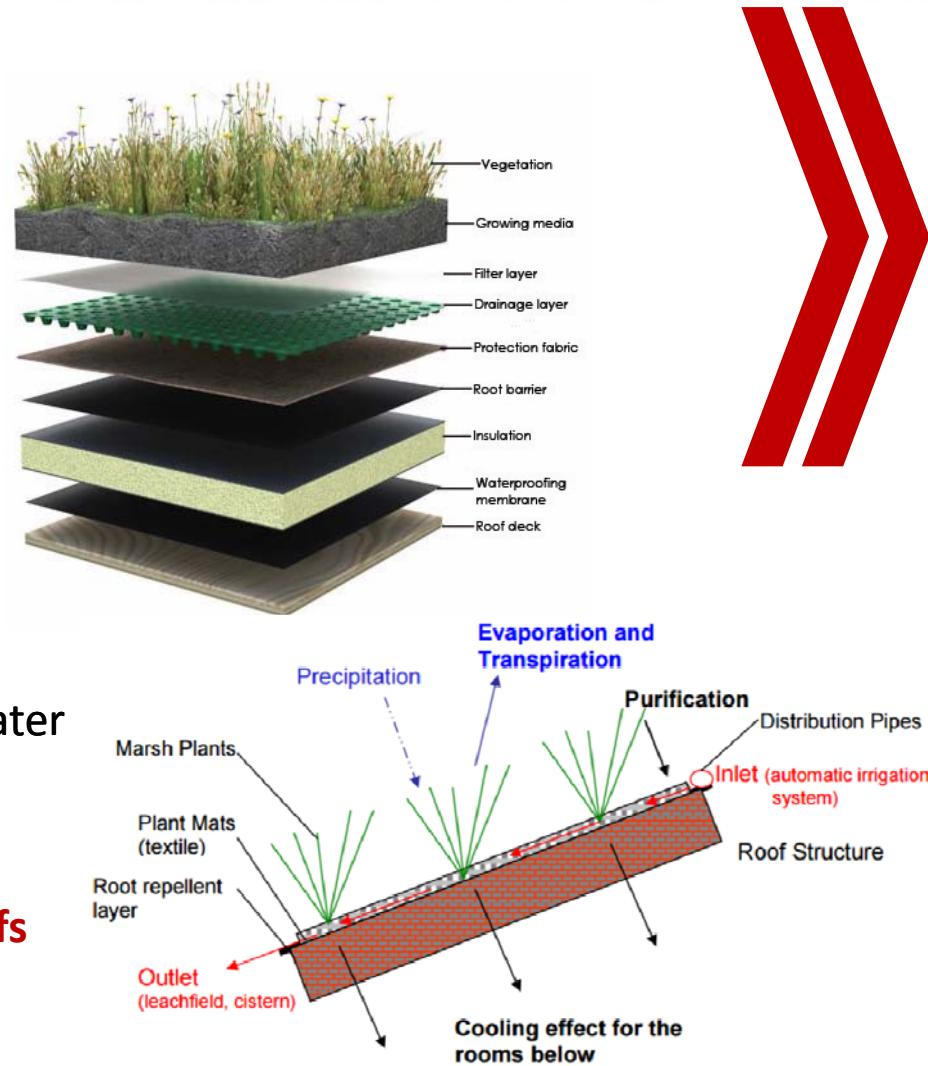

LEiTAT

Green Roofs

- Reduced rain water runoff
- Cleaner air quality
- Improved insulation
- Water purification
- Boosts urban biodiversity
- Sound absorption
- Aesthetic appeal
- Extended roof life
- Recreational space
- Potential to recycle wastewater
- New jobs creation

Wetland Roofs

Next step:

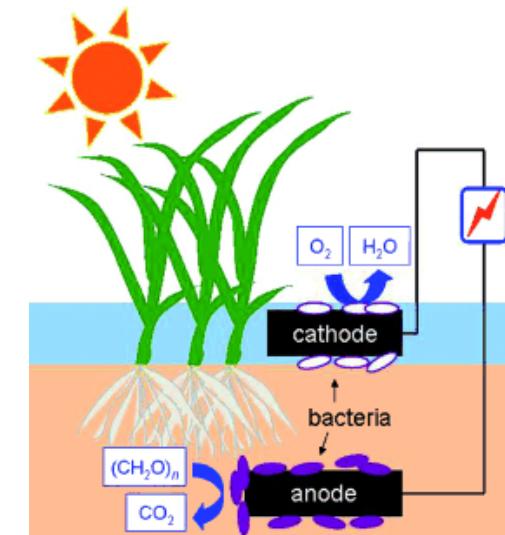

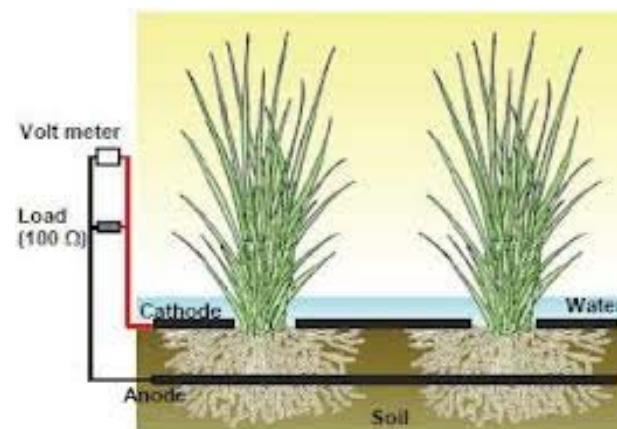

Electrowetland
roofs

Adding the
concept of
Plant-Microbial
Fuel Cell

Plant-MFCs State-of-the-Art

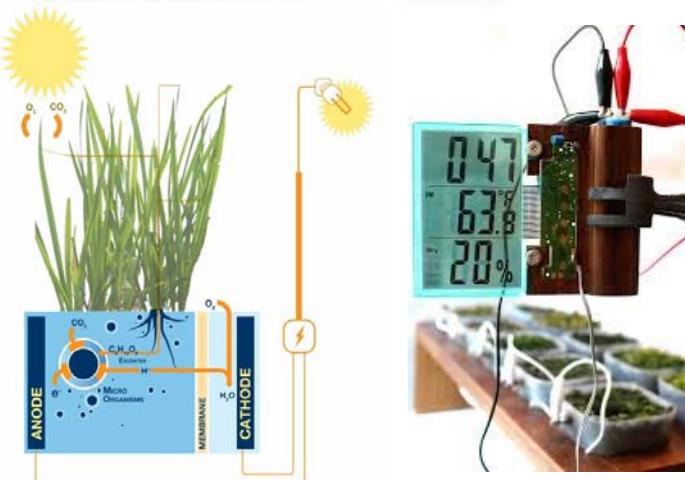

- Novel technology (2008) → light power biogeneration
- Plants produce organic material from photosynthesis , which they excrete as root exudates (70% of C).
- Bacteria transform exudates and donate electrons to the anode → Clean technology.
- *In situ* Electricity generation without removing the plants (24h/day).
- The P-MFC is a waterlogged system ≈ wetlands.

Applications

- Different plant species:
 - Rice fields
 - Mangroves
 - Grassy species
- Uses: sensors, illumination, etc

Real demonstration sites

- Dutch Institute for Ecology in Wageningen.
- Modules: 15 m² surface.
- Use: illumination, mobile recharge.

OBJETIVOS

- 1. Maximize energy generation per surface unit.**
- 2. Couple greywater treatment with energy generation processes.**
- 3. Efficient energy management. Link generation/demand -> Storage.**
- 4. Minimize energy consumption of devices.**
- 5. Add secure mechanism in order to increase data integrity within communication process.**
- 6. Renature cities: Boosting green infrastructures in urban environment.**

Technological Challenges in Electrowetlands Roofs

- The main challenge is to **increase the power output** of this system.
 - Maximal theoretical power output: $3,2 \text{ W/m}^2$.
 - Current power output: $0,4 \text{ W/m}^2$.
- For this purpose, several issues have to be addressed:

- Adapting the reactor design and operation.
- Decrease internal resistance.
- Increasing electric efficiency.
- Decreasing P-MFC costs ($70\$/\text{m}^3$) → cheaper technology.
- Novel applications: **greywaters** treatment.

Ideas to develop

Materials,
configurations,
etcetera

INNOVATION

In situ domestic **wastewater treatment**
couplet to **energy generation**

Searching for new scenarios: inclusion of Smart Systems

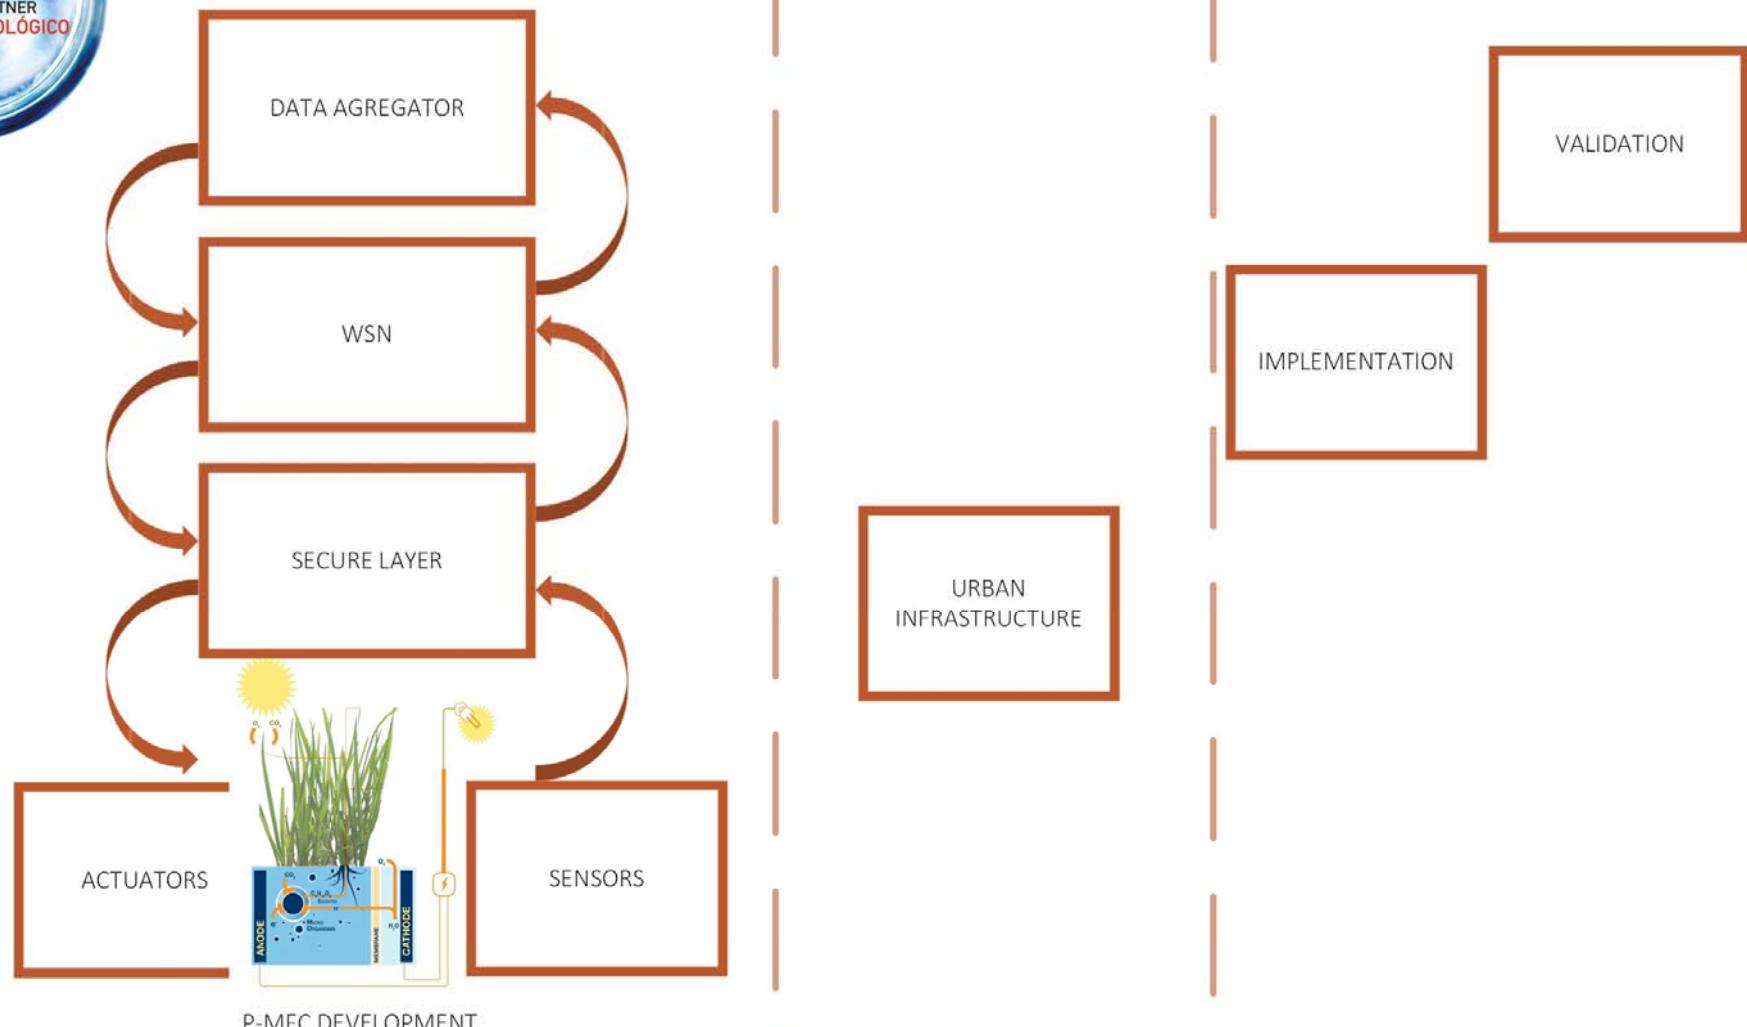

Electrowetlands roofs coupled to TICs to develop & implement:

- Reliable Low Power Wireless Network for building monitoring
 - Communications
 - Smart metering
 - Security
- Low Power Electronics
- Energy efficiency policies
- Energy harvesting

METODOLOGÍA

Actitivity 1
TECHNICAL DEVELOPMENT

Activity 2
SCENARIO

Activity 3
PILOT

RESULTADOS ESPERADOS

- 1. Autonomous sensor system fed by energy produced from nature-based solutions (electrowetlands)**
- 2. On-site treatment/re-use of greywater.**
- 3. Application of innovative sensors network for the intercommunication between devices**
- 4. Add secure data by the application of cryptographic chips**

RESULTADOS ESPERADOS

Maximize energy production by nature-based and sustainable solution
(ELECTROWETLANDS)

CONVOCATORIA A LA QUE SE PUEDE DIRIGIR

Convocatorias estatales 2016.

Contacto: Jordi Velasco: jvelasco@leitat.org

- Programa Estratégico **CIEN** de Consorcios de Investigación Empresarial Nacional (CDTI)
- Convocatoria **Retos-Colaboración** del Programa Estatal de I+D+i Orientada a los Retos de la Sociedad (MINECO)
- Acción Estratégica Economía y Sociedad Digital – **AEESD (MINETUR)**

European calls 2016-2017 -> Horizon 2020

Contacto: Lara Valentin: lvalentin@leitat.org

Sustainable cities through nature-based solutions

- SCC-02a-2016 Demonstrating innovative nature-based solutions for climate and water resilience in cities
- SCC-02b-2017 Nature-based solutions for inclusive urban regeneration

CONSORCIO EXISTENTE, LIDERAZGO Y PERFILES BUSCADOS

Empresas :

Fabricantes de dispositivos

TIC desarrollo software/hardware

Ingenierías /Arquitecturas

Organismo de investigación públicos y privados:

**Universidades, Centros tecnológicos, institutos de
investigación, etc.**

Ciudades que actuen como “runners” & “followers”
